Subject: Application for applying to the post of a Software Engineer.

Dear Sir,

My name is Shayan Shahriar. I have recently completed my graduation in Computer Science and Engineering from Bangladesh University of Business and Technology (BUBT). I have been working as a part-time web developer at K.R. Tech Solutions for the last two years and have worked on several real-world projects in this time. In 2023, I was honored with the “Open Sourcerer” role for notable contributions in the Chromium project. In 2022, I was nominated and awarded the “Most Hearted CodePen” award and became the 87th creative developer worldwide. In 2021, I collaborated with Brave Browser and designed their brand logo.

During my time at K.R. Tech Solutions, I have garnered foundational experience in front-end development, especially in React and Vue framework. I also have expertise in Next.js and Progressive Web App (PWA) development.

From your job circular posted on BDJobs.com, I came to know that your company is hiring for the post of Software Engineer who is skillful in Front-end Development and has previous experience working with React framework. Based on my current achievements, I think I would be a good fit for the position of a Software Engineer and I am applying for it.

Therefore, I am attaching the required documents and certificates and eagerly waiting to hear back from you.

Sincerely,
Shayan Shahriar
